

Pocketful

An AI software factory for payments

Oracle run, 4 October 2026

AI generated illustration, not an actual event photo

One dispatch, four stages

Observed room timeline

20:53:18 UTC
Human dispatch

22:07:03 UTC
Final text report

One human dispatch

555 agent events

No later human
messages

Full official room export

Factory roles and handoffs

Three external BAND SDK seats on Oracle Cloud

Coordinator Coordinator sequences complete handoffs and acceptance

Implementer Implementer builds each stage and reports its commit

Reviewer Reviewer checks exact revisions in isolated containers

All four stages passed first review; no rejection occurred

710 checks across four stages

Independent reproduction of the unchanged shipped suites

Stage folder	Required checks passed
Stage 1	147 / 147
Stage 2	182 / 182
Stage 3	188 / 188
Stage 4	193 / 193
All stage folders	710 / 710

Internal network, 2 CPU and 2 GiB per service

Required checks pass; all three overshoot probes fail as expected

Run duration and review outcomes

73 min 45 sec from dispatch to the final text report

About 76 minutes including room setup events

Four accepted stages

Zero reviewer rejections reported

No human steering after the single dispatch

Usage and cost evidence

Seat	Verified token usage
Coordinator	Unavailable
Implementer	Unavailable
Reviewer	Unavailable
Evidence scope	No usage counters in room export

USD 176.20 is a list-price estimate, not an invoice

Original usage logs pending; tokens remain unverified

Evidence and submission status

Public result: [jazzautomations/pocketful-dark-factory](#)

Four buildable stage folders, generic mandates, full room export

FACTORY.md documents setup and review flow

README.md links stage run instructions

Vibe Smokes created; Felipe invitation sent

Media corrections and footage eligibility remain pending
